

Document Management & Retention Policy

Policy ID

POL-OPS-006

Effective Date

10 March 2026

Owner

Operations & Legal

Purpose

This policy defines how business documents are created, classified, stored, retained, and disposed of.

Storage

Business records must be stored in approved repositories that provide appropriate access control, backup, and audit capabilities. Local-only storage should be avoided for records that require organizational retention.

Naming & Metadata

Documents should use descriptive names and include relevant owner, department, date, or project metadata where applicable. Sensitive documents should include the appropriate classification label.

Retention

Records must be retained for the period defined by the applicable retention schedule, contract, or legal requirement. Employees must not delete records subject to an active legal hold.

Access

Access to Confidential and Restricted documents must be limited to authorized personnel. Links granting access should use the narrowest practical audience and should not be posted in public channels.

Version Control

Important policies, procedures, and customer-facing documents should use version history or controlled repositories so that changes can be traced.

Disposal

When retention requirements expire, records should be securely deleted or destroyed using approved methods. Disposal must not bypass legal, regulatory, or contractual obligations.

RAG/AI Systems

Documents indexed into retrieval or AI systems must preserve their source classification and authorization metadata. Deleting or revoking a source document must trigger the applicable removal or re-indexing process.
